

## The Computer Security Threat

### *How?*

1. Files on mass storage are altered, erased or hidden.
2. Files & software copied to removable media, and then stolen.
3. Files accessed through modems, copied, altered, erased, or hidden.
4. Viruses, Trojan horses, and time bombs introduced into a system.
5. Physical damage to computer hardware, wiring or power sources.

### *Who?*

- Disgruntled employees.
- Maintenance personnel.
- Vandals and hackers.
- Competitors.
- Intelligence gathering organizations.
